AAC TMR-CONTROL

Granulated supplementary feed

Benefits

- Reduces heat development in TMR feed.
- Reduces the growth of undesirable bacteria and mould and extends shelf life.
- Antitoxic and 100% biodegradable.
- Non-corrosive and easy to handle.

Instructions for use

- Mix 0.5–2 kg per 1,000 kg of complete feed (TMR). It takes approximately 5–7 minutes to achieve an even and thorough mixture.
- Can be used without HACCP.

Pack size

- 20 kg bags

Heat in TMR feed, especially during the warm months, is a widespread problem that reduces feed quality and palatability.

AAC TMR-KONTROL is a dry acid product that inhibits heat development in TMR after feeding.

AAC TMR-KONTROL consists, among other ingredients, of mixed salts of organic acids, which reduce the growth of undesirable bacteria and mould and delay heat development in TMR feed.

AAC TMR-KONTROL protects against losses of nutrients and dry matter and keeps the feed palatable.

Not approved for organic herds.
